## US.

We are a multinational construction company with an innovative and dynamic vision in housing solutions, changing the most traditional parameters of the sector. Our values govern our decisions and projects. For this reason, we have a great human team over 35 professionals (Engineers, architects, financials, etc.) who, with the synergies of their values and knowledge, have made possible the optimal growth of our company.

In Grupo Kloos we follow the precepts of the circular economy and energy efficiency. Using sustainable resources and respecting nature, our team is aware of the duty to protect and conserve the environment. This perspective leads us to excellence. We walk our clients through the project, making them participate entirely in it.

## SERVICES.

We thoroughly check all phases of the work, achieving our objective under the budgets and deadlines, while meeting our very own high standards. We significantly pay attention to the details, innovating with the knowledge of new techniques that make our project sustainable and efficient.

Having a multidisciplinary technical team we take care of the entire building process, organizing and leading it. Furthermore, we offer complementary services from the application for permits to its final stage of the building, going through the viability of the project or the maintenance of the infrastructures.

## TURNOVER.

We have taken part in the deployment of over 100 projects, collaborating with more than 30 clients. The success rate was reflected in a 60 percent increase the last year, achieving growth in sales exceeding 6 million euros. Our international projection is becoming ever more noteworthy, standing the 10% of the invoicing volume in the last year. Our purpose is to extend the evolution of the company to the following years being loyal to the philosophy of our group.

Our technical solvency and the experience in Spain, France, Portugal and Mexico -where we have already consolidated ourselves in retail works, residential buildings, offices, and facilities- will be the starting point for expanding to other territories.
